

Unaffected by Japan Osaka Earthquake

June 20, 2018

Dear Customers:

The 6.1-magnitude earthquake hit Osaka in western Japan on Jun. 18, causing at least 5 deaths, 370 injured, buildings and roads collapsed. We understand that it might arouse your concern about the ordered deliveries from TSC.

After checking with all our related suppliers, none of our supply chain, lead frame suppliers, are affected by this situation, therefore it is confirmed that the disaster has no impact on Taiwan Semiconductor Headquarters, branch offices, factories and the whole supply chains. TSC is running smoothly and efficiently. For precaution, we are still closely monitoring the situation and are in constant contact with our suppliers.

We appreciate your concern and continuous support.

Best Regards

Andy Chao
